

ABT Sportsline 2020 – Press Release CW 02

A visual statement of pure power Complete aero package now available for 510 hp ABT SQ8

As of January 2020, the Audi SQ8 can pack an even greater punch. How come? **ABT Sportsline** now offers a complete aero package for the superlative SUV. Since November 2019, the Audi SQ8 can be equipped upon request with an **ABT Power** performance upgrade from the bavarian company. In this context, the high-tech control unit **ABT Engine Control** boosts the eight-cylinder 4.0 TDI from 435 hp (320 kW) to 510 hp (375 kW). At the same time, the world's largest tuner for Audi and VW vehicles has increased the maximum torque from 900 to 970 Nm. These fascinating figures also improve the sprint values: The time for the sprint from 0 to 100 km/h is reduced from 4.8 to 4.6 seconds. The remarkable sporting talent of the truly gigantic SQ8 just has to be seen.

The multi-part **ABT aero package** is completed by the newly available **ABT rear skirt insert** including quad endpipes for the exhaust. Additional components include the **ABT front skirt add-on** and the **ABT rear spoiler**. All items are also available individually. **ABT sport rims** are available in three different versions. There is the **GR** model, in glossy black or matt black, the **HR Aero** rim in dark smoke and the **HR-F** rim in shadow silver. All of the above models are available in 22 inch. Those who prefer a larger rim should choose the 23-inch **HR-F** version, which is available in dark smoke and shadow silver. Select your preferred individual combination from these and many other visual finishing options with the **ABT Configurator**. Here you can visualise in 3D the effect of the aero components and alloy wheels directly on the vehicle.

The Kempten engineers also optimise further the impressive driving dynamics of such a large SUV. And thanks to the **ABT Level Control** (ALC), the SQ8 can be lowered in three stages, thereby giving it a lower centre of gravity. **ABT Comfort Level**, **ABT Dynamic Level** and **ABT Loading Level** (Coffee-Mode) are the adjustable modes. The first mode lowers the suspension by 25 mm, the second by 15 mm - based on the respective series setting of the corresponding suspension programme. In **Coffee Mode** the SQ8 is put at the lowest setting of all, thus bringing the vehicle a whole 65 mm lower to the ground than in the original comfort mode.

In the meantime, attractive options for the interior are also available. In addition to the almost obligatory **ABT Sportsline start-stop-switch-cap** and the **ABT integrated entrance lights**, the bavarian company now offers full carbon **seat frame covers** as a special highlight for the distinctive SUV from Audi.
